MEd Annual Reporting Measures 2021
The Annual Reporting Measures are an important component of program improvement. Each semester, performance data on MEd GPA, key assessments and perspectives of graduates, alumni and employers are analyzed, and program improvement and course revisions are discussed based on the results. The data analysis becomes a key element for continual program improvement, creating a feedback loop, which informs administration of program needs for refinement of assignments, rubrics, instructor and student support and training, candidate performance, and unit operations. All with the intention to better support student learning.

In May 2017, external stakeholders reviewed MEd program data and information, visited the university, and engaged with the program director to develop recommendations for program improvement. This report guided the development of an action plan that will guide MEd program redesign through 2023.

Following is consumer information on UMGC MEd student performance, retention, and satisfaction. UMGC students in P-12 preparation programs are referred to as “candidates.” The information contained in the Annual Public Data Report is shared with the Teacher Education Advisory Board, and external stakeholders during the university’s 5-year Academic Program Review (APR).

Satisfaction of Employers & Employment Milestones (A.4.1)
Upon completing the MEd program, graduates are surveyed about their experiences and asked for consent to contact their employers. The employer contact information provided by graduates during this survey is assembled into an employer distribution list. Each summer, employers on the list are sent an employer survey.

Continually, the MEd employer response rate has been minimal. By exploring this trend, the program director has identified two issues. First, few candidates are granting permission to contact their employers, which results in a small distribution list from which to collect responses. Second, few employers from the list respond to the survey. As a result, the program director has taken additional steps to improve response rates: (1) written message and video, (2) email reminders, (3) employer phone calls. The program director also requested suggestions from the UMGC Teacher Education Advisory Board regarding how to increase the response rate on the employer survey.

The AY 2018-2019 alumni survey provided permission to contact five employers who were sent a survey in Spring 2020. Three employers responded. The supervisor/employer responses related excellent technology skills of the new teachers with administrators seeing that these new teachers
need to share their technology expertise with other teachers at the school.

**Satisfaction of completers (A.4.2)**

*Exit Survey*

At the end of the capstone semester, all candidates who successfully complete the MEd program complete an exit survey. The feedback gathered from this survey provides valuable information about candidates’ perceptions of their learning and the support they received during the program.

The exiting survey was administered to students who successfully completed the program in Spring 2019, Fall 2019, and Fall 2020. The survey was comprised of 17 questions with Likert scale ratings (well prepared, prepared, somewhat prepared, unprepared, insufficient opportunity). N = the number of survey responses.

In Spring of 2019, 99% of exiting students agreed that they were either prepared or well prepared to demonstrate each of the skills described in the 17 statements on the survey. In Fall of 2019, 92% of the exiting students were either prepared or well prepared to demonstrate program competencies. Spring 2020 results indicated that 95% exiting candidates felt prepared or well-prepared upon completion of the program.

**Alumni Survey**

The MEd alumni survey feedback is part of a formal, scheduled process for receiving feedback on how well the program’s instruction and support have served graduates in their current role. The survey is sent to program alumni who have completed the program within the last three years.

Questions are designed to elicit feedback on the authentic application of the program’s objectives, proficiencies, and dispositions. The survey results become a key element for continual program improvement, creating a feedback loop, which informs administration of program needs for refinement of assignments, rubrics, instructor and student supports and training, candidate performance, and unit operations.

The alumni survey uses fifteen 4-point Likert-type scale (Strongly Agree, Agree, Disagree, Strongly Disagree) questions. The overall score can be interpreted as the aggregated results of 15 questions representing the percentage of alumni who ‘agree’ or ‘strongly agree’ that the program goals, learning objectives, proficiencies, and professional dispositions were valuable to their current roles.

Alumni survey results consistently demonstrate overall satisfaction with the program. The table below displays the results of alumni survey questions for two academic years (AY 2018-2019, AY 2019-2020).

The number of alumni survey respondents was significantly lower in 2020. It is believed that this
is a result of the COVID-19 pandemic. With the extra responsibilities placed on teachers and their families during this time, it is possible that taking an alumni survey was a low priority.

Additionally, the percentage of students who strongly agree or agree with these statements is lower. The lower response rate is due partly to the lower response rate, causing each negative rating to have a greater effect.

### MEd Retention and Graduation Rates

UMGC is a nontraditional university. It operates as Maryland’s open, online public university, providing part-time undergraduate and graduate programs for working adults, including military service members and their families, and veterans who reside in Maryland, across the United States, and worldwide.

While measurement of retention and graduation is relevant to the university’s mission, it is unlike traditional universities. The MEd program has successfully retained a high percentage of candidates in the program until they are eligible to graduate. When candidates choose to exit the program before graduation, they are not successful in meeting course requirements, they are seeking less intensive professional development opportunities than graduate courses, or they are taking a break from coursework due to outside circumstances.

The most current retention-graduation rates appear below:
Ability of Completers to Meet Licensing (Certification Requirements & Any Additional State Requirements)

Average GPA of MEd graduates

When reviewing the average GPA of MEd graduates, it can be noted that both average and
median GPAs have increased or remained the same for each of the past three academic years.

<td>Median GPA = 3.91</td>
</tr>
</tbody>
</table>

Teacher Education – MEd Mastery Policy
To maintain national professional accreditation, the MEd program requires that students earn grades of 80 percent (B) or better on major assignments in certain courses—namely EDTC 600, EDTC 615, EDTC 630, EDTC 640, EDTC 645, EDTC 650, and EDTC 670. Performance of 80 percent (grade of B) or better on major assignments in these courses is required to move forward in the program. These courses are offered before specific transition points in the program.

Ability of Completers to be Hired in Education Positions for which they were Prepared

Data from Alumni Survey
When responding to the alumni survey, respondents are asked to provide employment information. In AY 2018-2019, 100% of alumni respondents reported current jobs in the field after completing the program. In AY 2019-2020, 100% of the alumni survey respondents had jobs in their field. These jobs included teacher, technology coach, technology director, integration specialist, technology support, instructional designer, technology trainer and founder of a non-profit for children.

Salary Information of Graduates
The work of educational technology specialists is similar to that of instructional coordinators, who, according to the Bureau of Labor Statistics, made an average annual salary of $670,160 in May 2019.

Educational technology specialists (ETS) can find career opportunities in elementary, middle, and secondary schools as well as in universities and in private and government organizations that offer classroom-based or online training. Teaching certification is often required for employment as an ETS in a public school.

The projected percent change in employment from 2016 to 2026 is 7 percent for all occupations. For instructional coordinator, the projected change in employment is 11%, faster than average. Mean wage and salary estimates for educational technology specialists appear below.

Student Loan Default Rates and Other Consumer Information

Student Loan Default Rates

The U.S. Department of Education publishes the Cohort Default Rate (CDR), which the agency uses to determine an institution’s overall performance with respect to federal student loan repayment. That cohort is tracked for three years and defaults in that three-year period affect the school’s published rate: “A cohort default rate is the percentage of a school’s borrowers who enter repayment on certain Federal Family Education Loan (FFEL) Program or William D. Ford Federal Direct Loan (Direct Loan) Program loans during a particular federal fiscal year (FY), October 1 to September 30, and default or meet other specified conditions prior to the end of the second following fiscal year.”

UMGC’s three-year cohort default rate is 6.1% compared to 11.8% nationwide. The most current default rate information appears below:

---

1 Estimates for detailed occupations do not sum to the totals because the totals include occupations not shown separately. Estimates do not include self-employed workers.

2 Annual wages have been calculated by multiplying the hourly mean wage by a "year-round, full-time" hours figure of 2,080 hours; for those occupations where there is not an hourly wage published, the annual wage has been directly calculated from the reported survey data.

3 The relative standard error (RSE) is a measure of the reliability of a survey statistic. The smaller the relative standard error, the more precise the estimate.
Default rates for 2019 will be available in 2022.
